Wondfo One Step Strep A Swab Test

CE and ISO certified. MHRA registered.

Throat Sample. 10 minute results.

This test is a rapid home test that diagnoses active Group A streptococcal (GAS) infection.

It is a qualitative test that detects GAS antigens.

A swab from the patient is used to identify GAS antigens using the LFT kit.

The results are demonstrated in 10 minutes.

The simplicity of use, rapid results and accuracy of results make this test unique.

Early detection of Strep throat allows early treatment with antibiotics.

This decreases the chances of the development of life threatening conditions associated with Strep A infection including Necrotising fasciitis(Flesh eating bug – 20% mortality and Strep toxic shock syndrome (STSS – 60% mortality), rheumatic fever, post streptococcal glomerulonephritis etc.

For a retailer of the test it allows after sales in the form of a doctor consult, prescription of antibiotics and a post treatment re test.

Wondfo One Step Faecal Occult Blood (FOB) Test

CE and ISO certified. MHRA registered.

Self-Test approved. Lateral flow technology.

This test is a home test that diagnoses colorectal bleeding in the human faeces.

It is a rapid qualitative test that is easy to use and detects occult blood by direct binding immunoassay.

A stool specimen from the patient is used to identify occult blood using the LFT kit.

The results are demonstrated in 10 minutes

The ease of use and capability of detecting smaller quantities of occult blood as compared to standard biochemical methods makes this the FIT test of choice.

Early detection of occult blood signposts the possibility of colorectal malignancy. Early treatment can save lives and prevent all the associated complications. UK bowel cancer screening rules recommend testing regularly after the age of 55-60.

For a retailer of the test it allows after sales in the form a doctor consult and further investigations.

Influenza A and B Rapid Testing Kit

CE and ISO certified. MHRA registered.

15 minute results.

This test is an in vitro diagnostic home test for the detection of Influenza A (Including H1N1) and Influenza type B.

A nasal swab specimen from the patient is used to identify active virus using the LFT kit.

The results are demonstrated in 15 minutes.

The ease of use and high diagnostic accuracy make this a very popular test.

The high sensitivity and specificity make this test stand out. It is also a single test for both strains of the virus.

In the UK the flu season is usually from November to March and demand for these test are high.

Early diagnosis permits early treatment with less complications and prevention of spread to vulnerable patients (very young, elderly, weak, immunocompromised etc).

Rapid test to detect Ferritin deficiency

CE and ISO certified. MHRA registered.

Pin prick blood test. 10 minute result.

This test detects ferritin deficiency in blood of less than 30ng/ml indicating the possibility of iron deficiency anaemia.

The test uses blood from a pin prick and results are ready in 10 minutes.

Iron deficiency anaemia is common especially in children and women of all ages causing symptoms of tiredness, paleness, shortness of breath, fast heartbeat etc. early detection with this test affords early treatment with changes in diet or iron replacement.

The test has all the relevant certifications including CE and ISO.

Wondfo One Step Ovulation Home Test

CE and ISO certified. MHRA registered.

Self-Test approved. Lateral flow technology.

This home test is for women wanting to conceive.

A urine specimen from the patient is used to predict an LH (Luteinising Hormone) surge that occurs at the time of ovulation using the LFT kit.

The results are demonstrated in 10 minutes.

The test is very useful for women trying to conceive as they can predict when they are likely to ovulate.

It is far more affordable compared to some of the more expensive solutions on the market.

One step test to detect the onset of menopause

CE and ISO certified. MHRA registered.

Urine Sample. 10 minute results.

This test is a home test that detects follicle stimulating hormone (FSH) in the urine indicating the onset of menopause.

A urine specimen from the patient is used to identify FSH using the LFT kit. The results are demonstrated in 10 minutes. You require two positive tests a week apart to confirm the onset of menopause.

The ease of use, high accuracy and early screening of menopause make it highly desirable. Early detection leads to early action taken to prevent complications of menopause and to avoid suffering from the undesirable symptoms for as long as a year before a final diagnosis. The test has all the relevant certifications including CE and ISO.

Wondfo One Step Sperm Concentration Test

CE and ISO certified. MHRA registered.

Self-Test approved. Lateral flow technology.

This test is a home test for men to identify sperm concentration in their semen.

A semen specimen from the patient is used to for qualitative detection of sperms using the LFT kit.

The results are demonstrated in 10 minutes.

The test is simple to use and far more economical than a POC sperm test.

One step test to detect Helicobacter Pylori infection

CE and ISO certified. MHRA registered.

Stool specimen. 10 minute results.

This is a home test that detects the presence of a bacteria call H Pylori in your stomach allowing for early treatment

A stool specimen is used with the rapid lateral flow test to determine the presence of H Pylori. A result is available in 10 minutes.

This is a simple and accurate alternative test to biopsy or antigen blood tests.

H Pylori can cause gastritis and gastric ulcers.

There is an increased risk of stomach cancer if you have this bacteria in your stomach. It is usually spread by kissing! Early detection allows treatment with antibiotics and the prevention of serious complications.

The test has all the relevant certifications including CE and ISO.

Rapid test to detect increased levels of Thyroid Stimulating Hormone.

CE and ISO certified. MHRA registered.

Pin prick blood specimen. 10 minute results.

This test detects elevated levels of FSH indicating the likely hood of Hypothyroidism.

A pin prick blood specimen from the patient is used to identify increased levels of TSH.

The results are demonstrated in 10 minutes.

This test detects raised TSH that is well recognised as the first test to diagnose hypothyroidism. It is easy to use and highly sensitive.

Patients who are experiencing symptoms of hypothyroidism including – tiredness, depression, feeling cold, weight gain, dry skin, brittle hair, constipation etc. should be prompted the use this rapid screening test to confirm a diagnosis of hypothyroidism.

This early detection can lead to early treatment and prevention of ongoing symptoms and complications.

The test has all the relevant certifications including CE and ISO.

Rapid test to assess levels of 25 – Hydroxy vitamin D

CE and ISO certified. MHRA registered.

Pin prick blood specimen. 10 minute result.

This test quantifies the level of 25 – Hydroxy vitamin D in the blood stream confirming the presence or absence of Vitamin D deficiency.

The test uses blood from a pin prick and results are ready in 10 minutes. The results inform if Vit D is deficient, insufficient and sufficient.

This easy home tests reports on the level of Hydroxy Vitamin D which is well recognised as the best indicator for determining levels of Vit D2 and Vit D3 .

Deficiency of Vit D is a global epidemic and is associated with significant health risks.

Early detection with this self-administered home kit can lead to early detection and treatment. The test has all the relevant certifications including CE and ISO.

FlowFlex Rapid Antigen Test for Covid-19

CE and ISO certified. MHRA registered.

Shallow Nasal Sample. 10 minute results.

The FlowFlex Rapid Antigen Test Kit is able to detect all known and emerging variants of the COVID-19 virus including Omicron BA.4 and BA.5..

These accurate lateral flow tests are supplied individually packaged with a 2 year shelf life.

FlowFlex is one of the most trusted home testing brands in the UK offering simple, rapid testing for home users.

These tests are ideal for those that need to test regularly including the very young, elderly, weak, immunocompromised etc.

Using a simple nasal swab within 2cm of the nose makes it extremely easy to administer an accurate test in a non-invasive way.

V-Chek Lollipop Test for Covid-19

CE and ISO certified. MHRA registered.

Our most accurate COVID test. 10 minute results.

This is a home test that detects the COVID-19 antigen.

A saliva swab known as a lollipop is placed into the mouth until soaked with saliva and then attached to the lateral flow device.

The results are available within 10 minutes.

The ease of use, especially in children and the elderly makes this a highly desirable test.

To add to that are high levels of accuracy and reliability.

The test has all the relevant certifications including CE and ISO.

One Step Oral Swab Home Drug Test Kit 2 in 1

CE and ISO certified. MHRA registered.

Unique 'Lollipop' style drug screening kit. 30 seconds

MOQ: 5000 units

This test is a rapid home test that detects cannabis and cocaine.

It is a qualitative test that detects these drugs rapidly.

The patient simply sucks the swab at the end of the test kit and the results are ready in 10 minutes.

The easy one step procedure with an immediate result makes this the drug testing kit of choice.

This test has wide applications in various sectors.

It allows early confirmation of drug use and can be used in schools, work places, by the police etc.
